Sub Category

Subject Conversion of DPR and PR ID into user friendly name

Description of Problem or Suggestion:

Currently the identification of a running process is represented as a 10+ digit number (DPR ID) determined by the system. An additional user friendly title that had, for example, PGE, and time of granule, would make the system more manageable and help debug processes and see trends of problems.

Originator's Recommendation

Provide a user friendly name that corresponds to the DPR ID. The instrument teams can help to make the names meaningful.

HAIS Response Date 6/10/96

The current design from Release A has the PTimeScheduled object creating the DPRID from the PGE name and version number with the data collection start time concatenated on the end. Release B will continue to use this convention with the addition of a tile identifier for certain tile-oriented DPRs where the data collection start time will not be enough to uniquely identify a DPR.
